

Setup:

- a) Create 'client1' which is a copy of the supplied windows-based client
- b) Create 'client2' which is a separate copy analogous to 'client1'
- c) Add two different text files, file1 and file2, to each client respectively

Test#	Description	Result
1	Connect with one client (client1)	Initialization message received, file1.txt in file list file1 info sent on all connections
2	Connect with two simultaneous clients (client1, then client2 shortly after)	Initialization message received, file1.txt in the file list THEN: Initialization message received, file1.txt in the file list, file2.txt in the file list file1 and file2 info sent on all connections
3	Force quit a client	Nothing happens (intended, user information will time out naturally) Communications continue with other connected clients
4	Allow a client to time out	User information and associated files were removed from user list No errors Messages about files associated only with that peer cease
